

Zusammenfassung

Es wird ein neues Universalendoskop beschrieben, das, da es mehrere auswechselbare Optiken aufweist, jede diagnostische und therapeutische Handlung im Urogenitaltrakt mit der *einmaligen* Einführung eines Schafes gestattet. Dadurch werden die Unannehmlichkeiten und Gefahren der Endoskopie auf ein Minimum reduziert.

Summary

The universal endoscope described here comprises a combination of various exchangeable telescopes which permit any diagnostic and therapeutic procedures in the genito-urinary tract. Since the sheath has to be introduced but *once*, the inconveniences and dangers of endoscopy are reduced to a minimum.

Résumé

Un nouvel endoscope universel est décrit. Il comporte plusieurs optiques de rechange permettant après l'introduction d'un seul manchon de pratiquer toutes les manœuvres diagnostiques et thérapeutiques au niveau du tractus uro-génital. Les inconvénients et les dangers de l'endoscopie sont ainsi réduits au minimum.
