Erratum

Unfortunately, in the paper by Suzuki K: CA19-9 as a serum marker for poor prognosis in urothelial carcinoma. *Urol Int* 2004;73:357, the last part of the text went missing. It should now read:

‘So, the authors should examine whether hydronephrosis exists or not in their patients. I think that their results were due to not only the tumor expression of CA19-9 but also of the associated hydronephrosis. I am interested in making further investigations based on this study considering the aforementioned three points.’
